### What is gout?

- Most common form of inflammatory arthritis worldwide
- Almost 4% of individuals in BC have been diagnosed with gout
- Caused by a high level of uric acid (a chemical in the blood)
- Leads to sudden painful attacks and, if left untreated, permanent joint damage
- The hospitalization rate for gout has doubled over the past decade

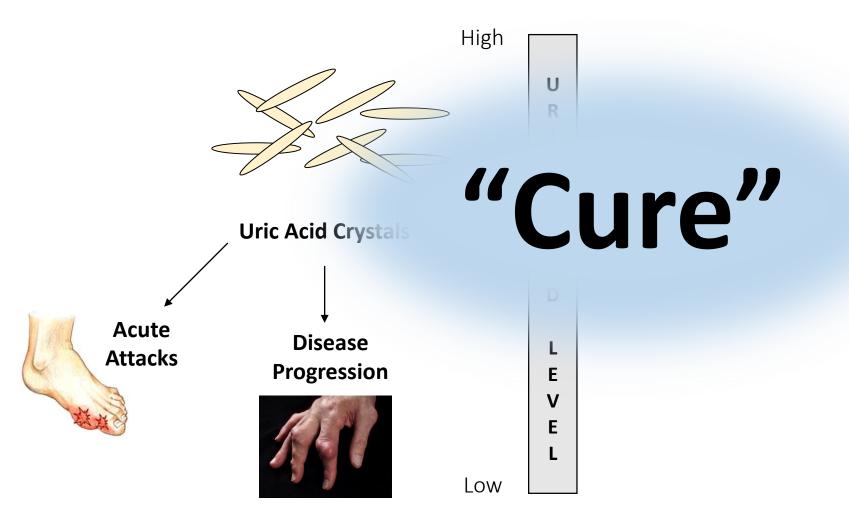

Supported by the Gout & Uric Acid Education Society. GoutEducation.org Illustration by Bol's Eye Comics.

#### Risk Factors

Age

Male

Family history

Obesity

Sugar-sweetened soda

Alcohol intake

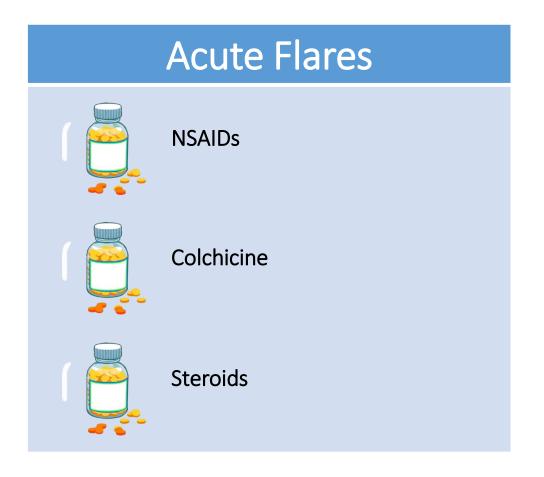

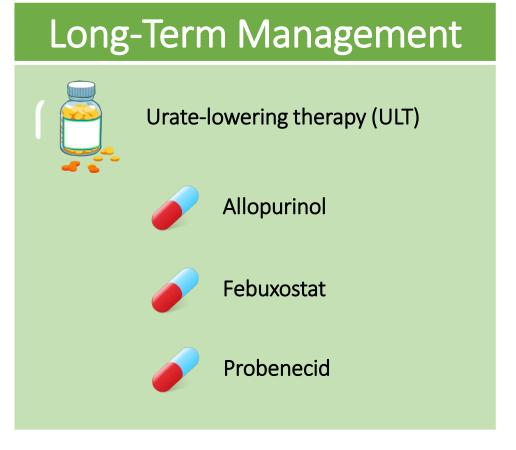

Red meat and seafood

Diuretics

#### **Treating Gout**

#### Management Challenges

Primarily treated by general practitioners

Approximately 1/5 of gout patients in BC are receiving ULT

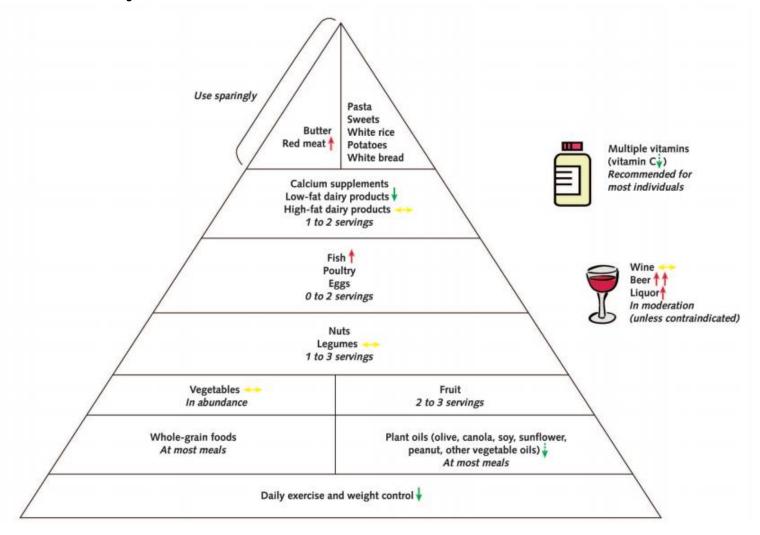

As few as 10-46% of gout patients take their medications as prescribed – lose therapeutic benefit

= Recurrent attacks and disease progression
